

Student 4 - Live Demo, Testing & Conclusion

Time: 2 minutes

"Thank you. Now I will demonstrate the application live and show you the test results."

| Action: Open terminal. Navigate to project folder.

"First, let me compile the project. I type javac dash d bin src slash star dot java."

| Action: Type compile command. Press Enter. Show success.

"Now let me run the application. I type java dash cp bin Main."

| Action: Type run command. Press Enter. Show menu.

"Let me post a lost item. I choose option 1, enter Phone as name, Electronics as category, today's date, Library as location, and my contact number."

Action: Type 1, fill in all fields, show saved confirmation.

"Now let me view lost items. I choose option 3. You can see the phone I just posted."

Action: Type 3, show table output.

"Let me search for it. I choose option 5, keyword search, type Phone. It finds the item."

Action: Type 5, then 1, then Phone. Show search result.

"Now let me claim it. I choose option 6, enter the item ID, confirm with y. It is now resolved."

Action: Type 6, enter ID, type y. Show Done message.

"Let me show you the tests. I run java dash cp bin Tests."

Action: Exit app. Run Tests. Show 23 passed, 0 failed.

"All 23 tests passed. This verifies record counts, posting, searching, claiming, date validation, and error handling."

| Action: Point to test results on screen.

"In conclusion, LAFSys is a simple, effective solution for campus lost and found. It is 403 lines of Java code, uses no external libraries, and solves a real problem."

| Action: Show conclusion slide if available.

"Thank you for listening. We are happy to take any questions."

| Action: Step back. Smile. Be ready for questions.
